Grid layouts

The Grid Layout defines how content is structured inside the main container across breakpoints. It controls column count, gutters, and margins, and ensures consistent alignment throughout the product.

The grid is responsive and adapts based on available content width.

ⓘ **Note:** To see the grids turn on Layout guides (Shift + G)

No side panels

XS (Compact) - 4 Columns

360- 600 px

SM (Medium) - 8 Columns

600–1023

360- 600 px — Right panel

SM (Medium) - 8 Columns

600–1023 — Right panel

MD (Standard) - 12 Columns

1024–1439 — Right panel

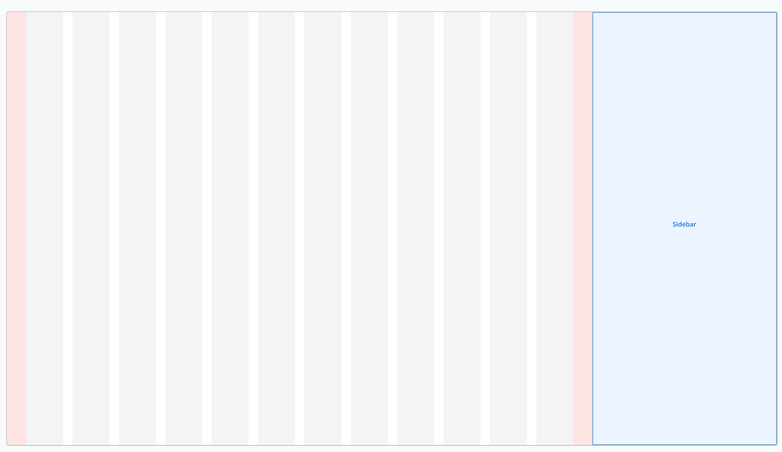

LG (Wide)- 12 Columns

1440 –1919 — Right panel

XL (Ultra / HD) - 12 Columns

1920+ — Right panel

Layout Priority & Collapse Logic

When space is limited:

- Main content remains primary
- Secondary panels collapse first
- Optional elements hide before structural elements

XS (Compact) - 4 Columns

360- 600 px — dual panel

SM (Medium) - 8 Columns

600–1023 — dual panel

MD (Standard) - 12 Columns

1024–1439 — dual panel

LG (Wide)- 12 Columns

1440 –1919 — dual panel

XL (Ultra / HD) - 12 Columns

1920+ — dual panel
